ABSTRACT

Prepared for teachers working with disadvantaged students, this booklet contains keys and indexes for activities in the out-of-doors. It should be used in conjunction with field trip activity sheets and follow-up materials currently available through the Southeastern Pennsylvania Outdoor Education Center and described in the following documents: SE 015 816 - SE 015 818. Each of the 88 field trip activities and 82 follow-up items is categorized according to Valett's schema of basic learning abilities: (1) Sensory-Motor Integration, (2) Perceptual-Motor Skills, (3) Language Development, (4) Conceptual Skills, and (5) Social Skills. The keys indicate both major divisions and subdivisions of the schema. Indexes also reflect all the subdivisions contained within the major categories and note specific activities for each component. The activities are designed for students in grades kindergarten through six, focusing on the interdependence of life; the relationship of man, animals, and plants to each other and to the environment. They utilize a discovery and questioning approach to study (1) the seasons, (2) flora, (3) fauna, (4) habitats, (5) weather, geology, soils, hydrography, and (6) awareness, man and nature. (BL)

These keys and indices were developed in 1971 by Mr. Robert Garowski of the Southeastern Pennsylvania Outdoor Education Center in cooperation with the staff of the Harvard Avenue School for Special Education, Swarthmore, Pennsylvania. The Southeastern Pennsylvania Outdoor Education Center was a Title III project administered by the Rose Tree Media School District, Lima, Pennsylvania.

Introduction

The exceptional student, both academically talented and disadvantaged, has been an integral part of the Southeastern Pennsylvania Outdoor Education Center program since its inception. For this reason, a major curriculum development effort was launched to prepare materials for teachers working with this specific type of student.

In the academically talented area of emphasis a number of units have been prepared as a part of the center's learning resource center program. These units have been tested with area students, have been revised, and are currently available to interested individuals.

The materials prepared for teachers working with disadvantaged students are herewith contained and take the form of an index and classification schema. The reason for this type of format is because there is a compatability between the center's currently available field trip activity sheets and follow-up materials, and materials geared for the disadvantaged. It was decided, therefore, that it would be useful to categorize each field trip activity sheet and follow-up item according to a universally recognized schema.

The schema decided upon was one prepared by Robert E. Valett in his handbook of psychoeducational resource programs entitled The Remediation of Learning Disabilities. Valett used six major categories to classify basic learning abilities. The material contained within this index reflects only five of those six: (a) Sensory-Motor Integration, (b) Perceptual-Motor Skills, (c) Language Development, (d) Conceptual Skills and (e) Social Skills. Similar to Valett the index likewise reflects all of the subdivisions contained within each of these major categories.

The index and classification schema are meant to be used in conjunction with the Activity Master Key and Follow-Up Master Key that accompany the Single Field Trip Activity Sheets and Follow-Up materials. It is for this reason that the index has ommitted the Title, Emphasis and Season to be used for each activity and follow-up.

It is noteworthy that the teacher using these materials may have to supplement the activities and follow-ups with additional materials (e.g. a picture which students may use to match or identify organisms seen in the field for visual-form discrimination skills).

However, an effort was made to categorize the activities so this would not become overburdensome.

The materials being indexed and classified unlike Valett's, deal with many basic learning abilities simultaneously. It was felt that such materials would still meet an individual teacher's needs in that she deals with many diverse problems in her classroom. To make outdoor education meaningful to all students, activities containing basic learning abilities of more than one type were essential. The outdoor education materials are of this type.

Many thanks go to the staff of the Harvard Avenue School for Special Education in Swarthmore, Pennsylvania for providing direction in the preparation of these materials. Much appreciation goes to them for their interest and for the contribution of their professional talents.
